

UpToDate in action

Trusted for evidence-based clinical decision support by 2 million clinicians worldwide, in Tenet hospitals and beyond

Clinical staff benefit from using aligned resources consistently across the health system

"Our clinical staff overwhelmingly prefers and relies on UpToDate® and UpToDate® Lexidrug™ to make the best treatment and medication decisions. The solutions work together, right within the workflow, helping us to provide quality patient care."

Bruce Mueller, PharmD, FFCP, FASN, FNKF, Professor and Associate Dean of Academic Affairs, College of Pharmacy, University of Michigan

"The addition of UpToDate at the enterprise level some years ago filled a critical void in providing standardized access to clinical decision support. Both UpToDate Lexidrug and UpToDate are integrated into our EMR informatics build, and they complement one another in providing reliable and comprehensive therapeutic clinical decision support and drug specific information."

Mark Jordan, PharmD, Director of Pharmacy, Yuma Regional Medical Center, Arizona

Creating opportunities for cost savings

"Without UpToDate, I would order more tests and admit more patients. With UpToDate, I can justify my admissions, which also helps with reimbursements."

Dr Barbara Jill McCabe, Director, Pediatric ED and Hospital Services, Inova Health System, Virginia

And reducing administrative burden on physicians

"UpToDate Workflow Access in Cerner makes it easy for our providers. Before this new integration, they would use UpToDate as they were doing their job, but then they would have some extra logistics if they really wanted to capture their CMEs. With this method, they just access it in the context of their workflow. They don't have to think twice about it now. They're loving it, and they're getting their CMEs just by doing their jobs without having to do the extra log-in step."

Dr. Dean Cauley, Chief Medical Information Officer, Children's Hospital of The King's Daughters, Virginia

Workflow integration with Cerner and other EMRs helps drive quality, consistency, and ease of use

"I believe that Wolters Kluwer is doing an excellent job of partnering with Cerner to make solutions like UpToDate work very well with their product, and that work is appreciated by us, as customers."

Brent Loftis, Director, Information Services Clinical Applications, Children's Hospital of The King's Daughters, Virginia

Hospital-wide access to UpToDate helps all care teams more safely treat patients

"UpToDate is a well-regarded tool to support therapeutic decision-making familiar to pharmacy and medical professionals alike. Recognizing the value of a clinical decision support tool in assisting our clinical pharmacists to provide patient care and support."

Mark Jordan, Director of Pharmacy, Yuma Regional Medical Center, Arizona

Unparalleled quality of content allows all clinicians to treat patients with confidence

"The clinical teams trust UpToDate. It gives them the confidence to make care decisions because they trust the information, because it's evidence-based."

Dr. Jonathan James, Ph.D., Chief Strategy Officer, Axis Medical Center, Minnesota

"Bottom line, the [other] resource is not as strong [as UpToDate] for attending-level inquiries and would be detrimental to our clinical practice. People felt strongly that it was going to impact their day-to-day ability to provide the best patient care. I personally feel very strongly that I do not want to lose my UpToDate access."

Dr. Brionna Matt, Infectious Disease Department, Temple University Health System, Pennsylvania

"I thought honestly most people would not know the difference [if we switched resources]. But UpToDate behaves like a consultant, not like an encyclopedia. You're asynchronously consulting with the experts who wrote the article."

Dr. David Fleece, Chief Medical Information Officer, Temple University Health System, Pennsylvania

"Owensboro Health clinicians rely on the accuracy and authority of the data UpToDate and UpToDate Lexidrug bring to patient care. Their integration into the usual workflows for clinicians allows for rapid access to the info needed at the right time."

David E. Danhauer, MD, FAAP, FHIMSS, System Vice President, CMIO, Owensboro Health, Kentucky
