Ovid Discovery AI: The most user-friendly, precise search experience on the market

Turn your library into a discovery and delivery hub with Ovid® Discovery AI.

Today's complex healthcare environment requires constant research and innovation to drive improvement. That process starts with literature searches, but staff and students may be unsure how to approach the task. Traditionally, medical librarians have spearheaded those efforts. Now, Ovid Discovery AI can multiply your efforts and accelerate that process for all users, regardless of their experience level with searches.

Ovid Discovery AI is a comprehensive search solution tailored to health systems and academic institutions. It provides equitable access for all staff and students and maximizes users' efficiency, transforming searches into successful finds.
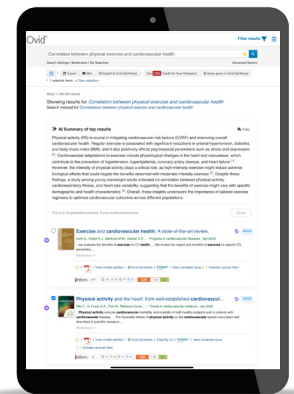

User-friendly, fast, precise

Ovid Discovery AI combines effortless natural-language search features with advanced generative AI technology to increase search precision. Beyond traditional keyword matching, it considers a query's context and meaning to deliver the most relevant results faster than other discovery services. Additionally:

- A summary tool provides a recap of the top search results.
- Link Resolver and Citation Matcher reduce retrieval time by providing the shortest path to accessing full texts, notifying users whether texts are available in their institution's library or via interlibrary loan service.
- Most relevant, AI-generated results are listed first and indicated with an AI icon.

A library's portal; a librarian's toolbox

Ovid Discovery AI is more than a tool — it's a toolbox for librarians that provides a centralized, one-stop-shop platform for all library services, tools, and content. Its content management features turn Ovid Discovery AI into your library's homepage, which you can leverage to increase the library's visibility.

For example, you can populate its built-in calendar with library events, provide search usage tips using its blog template, generate customized surveys, and post news about library holdings. Ovid Discovery AI's content management module also autogenerates notices of your latest Ovid-based acquisitions and posts Medline® news.
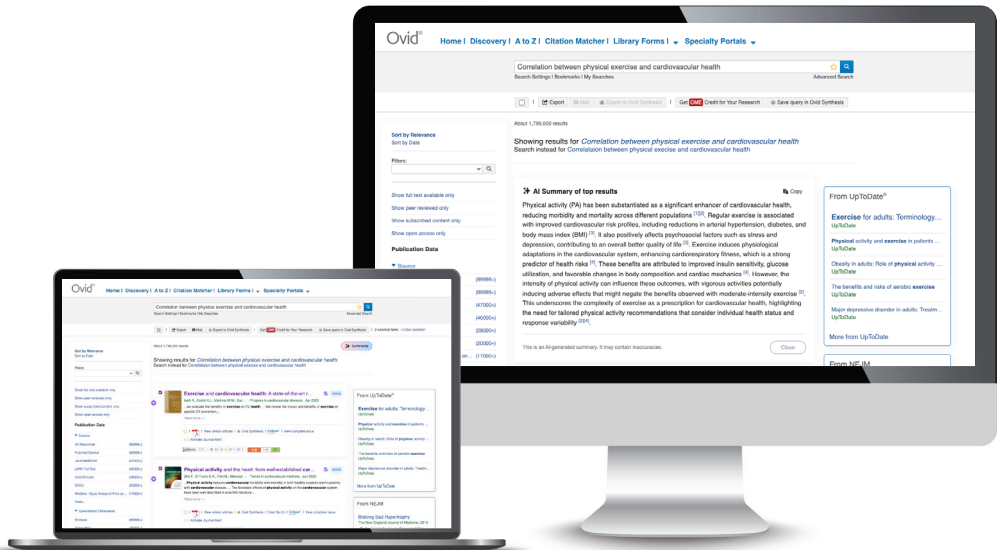

Ovid Discovery AI:

Streamlines searches

Fosters a culture of inquiry

Offers equitable access of scholarly information to all levels of users.

Additionally, Ovids Discovery AI offers:

✓ **Reports & Statistics module**
This tracks usage patterns and changing needs and provides insights into service and resource utilization, which can inform your library's purchasing decisions.

✓ **Holding module**
This manages and automatically updates all accessible eResources (journals, books, databases) as they are added or removed from your library.

✓ **Security module**
You decide who has access to the system and to what degree.

✓ **Exclusive content that no other discovery service offers**
See sidebar.

Increased library usage; equitable access for all

Ovid Discovery AI customers note at least a 10% increase in search usage within the first year of implementation. Standard implementation can be completed and fully configured to your needs within two weeks.

Ovid Discovery AI is a key resource for providing equitable access to staff and students. For all levels of users, it invites greater engagement with the library.

By promoting equitable access, boosting efficiency, and supporting the missions of medical and academic institutions, Ovid Discovery AI sets a new standard for excellence in transforming medical and academic research. Its highly accessible gateway increases accessibility and provides all the power of Ovid, the world's most trusted medical research platform for over 20 years.

Seamless integration with Ovid® Synthesis

Evidence-based practice and quality improvement projects begin with literature searches. In that regard, Ovid Discovery AI represents the "front end" of a seamless continuum. Users can directly upload search results into Ovid Synthesis, a workflow solution for EBP and QI projects.
