

# Ovid® Discovery AI:

## Transform evidence access with AI-powered precision

Ovid® Discovery AI is transforming how healthcare and academic institutions approach research challenges. Leveraging advanced artificial intelligence, the platform delivers unparalleled precision and efficiency, ensuring that users uncover high-quality, relevant insights faster than ever before.

### Designed for Precision, Powered by AI

Ovid Discovery AI combines user-friendly features with cutting-edge AI technology to deliver a search experience focused on reliability and effectiveness. By going beyond keyword-based searches, it uses semantic understanding to process and refine queries, delivering contextually accurate results tailored to the needs of medical librarians, healthcare professionals, educators, and researchers alike.

### Features That Define Excellence

- ✓ **AI-powered search suggestions:** Based on query context and user intent, the platform dynamically generates related search suggestions, guiding users toward deeper discovery.
- ✓ **AI generated summaries:** Each result is accompanied by a reliable, AI-generated summary that synthesizes the most important takeaways and cites supporting sources — saving users time and guiding their next steps.
- ✓ **AI results analysis assistant:** Support with assessing impact, methods, and outcomes at a glance. Suggested queries and main concepts guide deeper exploration, delivering the most relevant evidence with exceptional speed and accuracy.
- ✓ **AI biomedical semantic search & facets:** Artificial intelligence transforms queries and content into semantic vectors — allowing the platform to return highly relevant results, even when different terminology is used. Users can refine their search with biomedical facets mapped to MeSH categories like diseases, drugs, and more.
- ✓ **AI contextual matching:** Whether users search “impact of alcohol on depression” or “mental health effects of drinking,” Ovid Discovery AI surfaces the most meaningful research — not irrelevant noise.

### Ovid Discovery AI:

**Find what you need,  
fast**

**Centralize all your  
resources**

**Gain actionable library  
insights**

## Find what you need, fast

AI-powered search and contextual matching gets to the true meaning behind search queries, delivering relevant results and concise summaries, reducing irrelevant noise. Your AI Results Analysis Assistant also extracts study details and publication quality metrics so you can quickly assess evidence strength and make informed decisions with confidence.

## Centralize all your resources

At the heart of Ovid Discovery AI is its centralized repository, which transforms fragmented institutional assets into an accessible, unified knowledge hub. Rather than navigating disparate systems, users can instantly access all licensed library resources alongside organizational best practices and proprietary documents.

This customizable repository removes traditional barriers to information access, enabling students, researchers, and clinicians to focus on leveraging knowledge rather than hunting for resources.

## Gain actionable library insights

Medical libraries can gather intelligence on resource usage and user behavior, enabling informed decision-making on content acquisition and library resource allocation, maximizing ROI. With the 360° Insights Dashboard and personalized reporting available, institutions can track resource usage, optimize content acquisition strategies, and identify emerging needs through data analytics embedded within the platform.

**Data-driven oversight  
for library leaders.**

## Ovid Synthesis Integration: From Discovery to Action

### Drive EBP with End-to-End Efficiency

The integration between Ovid Discovery and Ovid Synthesis transforms isolated research workflows into a streamlined, end-to-end solution. It connects the search for evidence with project-based synthesis and documentation — empowering clinicians, educators, and researchers to move from literature to practice in just a few clicks.

Designed to bridge the gap between finding evidence and applying it, this integration turns search results into active clinical or academic insights — complete with AI-enhanced tools and centralized project oversight.

### What Makes It Different

- ✓ **One-Click Transfer from Ovid Discovery to Synthesis**  
Seamlessly send search results into new or existing projects in Ovid Synthesis directly from the Discovery interface. With a single click, users can begin analyzing and synthesizing the literature they just found — no downloads or separate systems required.
- ✓ **End-to-End Workflow of EBP Project**  
Finalized project summaries from Ovid Synthesis can be exported as PDFs and uploaded back into Ovid Discovery — making institutional evidence searchable, citable, and accessible to the broader organization or the public. This creates a full evidence cycle: **Search → Synthesize → Share**.
- ✓ **Support for Governance and Leadership Oversight**  
Administrators can view project activity, progress, and output in a standardized format, enabling more effective oversight across departments and initiatives.

## Why Choose Ovid Discovery AI?

Ovid Discovery AI outshines standard discovery tools with unmatched AI-driven features and accessibility improvements. Built specifically for healthcare and academic research environments, the platform is backed by over 20 years of Wolters Kluwer expertise.

### Exclusive Advantages Include:

- Comprehensive integration with proprietary resources such as UpToDate®, Lippincott® Procedures, and LWW journals
- AI-optimized workflows tailored to biomedical research and education
- Trusted, validated sources ensuring evidence relevance and accuracy
- ISO-certified hosting on AWS with advanced security protocols
- One-click access to full text or document delivery from 50,000+ OA titles and 53,000 publisher collections
- Works across Google, PubMed, EBSCO, Ovid, and more.
- Koha LMS Integration for streamlined user experience to access library holdings.

Bundled with  
Ovid® Discovery:

UpToDate®

Lippincott®  
Procedures

Ovid® Databases

LWW Health Library®

New England  
Journal of Medicine
