

Prevention opportunities across the care continuum

Before clinic visit:

Meet patients where they are by identifying early risk

- AI flags population health gaps
- Activate with personalized screenings, outreach

During clinic visit:

Enable clinicians with faster, personalized decisions

- Integrated digital health data
- AI-powered evidence at point of care

Post-clinic visit:

Reinforce care plans and reduce long-term risk

- Personalized evidence-based education
- Digital medication information

Ongoing prevention:

Innovation and education for long-term outcomes

Clinical and drug evidence updates

On-demand patient education and portals for adherence

Digital health monitoring
