

CT Corporation

Entity data when, where  
and how you need it

**hCue Entity Management System**

You handle requests for entity data, documents and organization charts daily. hCue is the system that makes it easy to find, update and share information across your organization, so you can meet the relentless challenge of doing more with less.

**88%**

Percentage of Fortune 1000 companies we support

**10**

Average years of experience of our service team members

**125+**

Years of compliance expertise

### **A dynamic system that keeps you in control**

hCue is a central, secure source where you can manage vital company information. Share data on demand, prepare for audits, stay ahead of compliance deadlines, create organization charts in real time, improve efficiency and more.

### **Organized, accessible and secure**

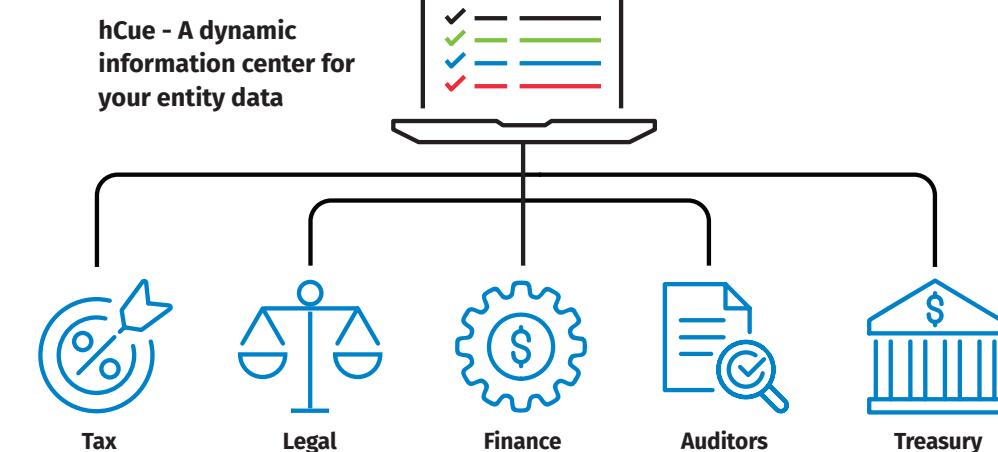

Easily update and access the information your internal and external stakeholders ask for. You choose how to share, with progressive levels of role-based security. hCue's powerful organization chart function is the most advanced in the market. It automatically updates to reflect new data entered into hCue. Create customized, detailed org charts, utilizing shapes and colors, for real time structure or compare structure at two points in time, and visualize future "what if" scenarios.

### **Designed for you by compliance experts**

Every detail of hCue was designed with hands-on input from corporate secretaries and other legal professionals. From the data structure and security protocols to customizable fields and organization charts, CT's deep compliance knowledge base helps your whole organization stay ahead of requirements. DocuSign integration and single sign-on enhance security and streamline workflows.

### **Get started quickly and confidently**

Successful implementation is part of the hCue system. CT's industry-leading transition and implementation process starts with assessing your organization and auditing your data. You can be confident that you're starting with up-to-date, accurate information in a system configured to meet your needs.

**CT Corporation**

A single, secure source of current entity data

## hCue Entity Management System

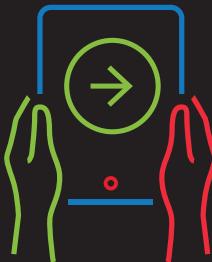

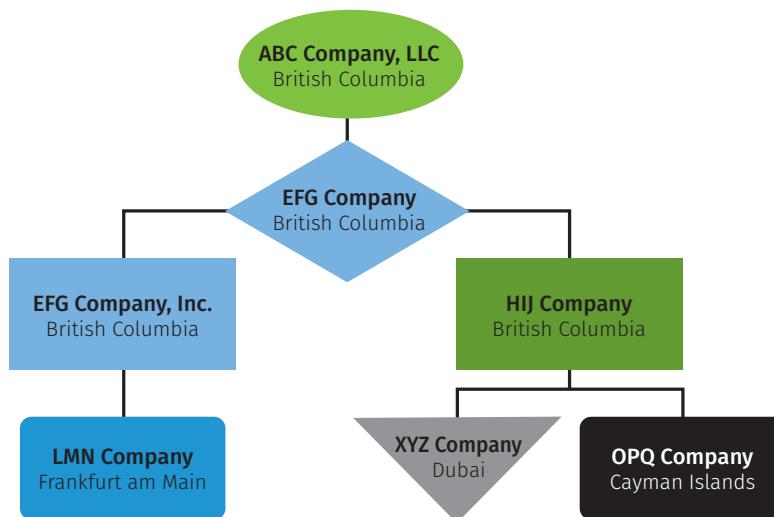

CT's knowledgeable implementation and support team helps you integrate hCue with your process and workflows.

### Product features

- One platform links all your entities and appointments: active, inactive, foreign, domestic and global
- Create automated filing calendars for annual reports, registration, licenses, permits and other date-driven compliance requirements
- Customizable fields capture industry- and company specific data
- Role-based access keeps stakeholder communication within your control
- Manage digital documents, e-signatures and evidence storage in a seamless workflow with DocuSign integration
- High level security protects your data – SSAE 16 SOC 1 Type II
- Optional single sign-on gives your department quick access and enhanced security
- Build org charts in real time by division, country, business group, and other entity properties
- Segment your org charts utilizing Chart Books to create multiple pages of larger in-depth org charts
- Construct “what if” scenario org charts to envision prospective changes and even compare structure at two points in time
- Accept auto updates from CT to streamline the workflow of self-managing hCue
- Ongoing support starts with a proprietary implementation process

hCue's dynamic org charts tool helps you deliver custom org charts on demand.

### Benefits

- Keep company information up-to-date and accessible in a central database
- Respond quickly and easily to information requests
- Avoid fines and penalties by staying ahead of compliance due dates
- Streamline workflows for managing complex and dynamic entity structures
- Safeguard your vital corporate data
- Manage all of your org chart needs end-to-end from within hCue, including point-in-time and what-if comparisons
- Be confident that you're starting with current, accurate data
- Save time and steps when sending documents for signature and storing them as evidence
- Maintain stricter control over system access with optional single sign-on
