

## Insurance Compliance

# NILS™ AI Assist, powered by Expert AI

Transform insurance compliance research with NILS INsource, powered by Expert AI

**Insurance compliance teams are navigating an increasingly complex regulatory landscape, compounded by staffing shortages, tighter budgets, and growing pressure to do more with less.**

Traditional keyword and filter-based compliance research tools can be inefficient or complex, yielding too many or too few results, and requiring users to click through endless links, spending valuable time on manual tasks. Compliance professionals need the ability to ask the urgent questions affecting their business and trust the answer provided will be complete and correct. The AI-first, on-demand world is raising expectations for speed and efficiency, while regulators are intensifying scrutiny on insurance carrier and third-party compliance. Teams are demanding intuitive and accurate research tools, combining the modern innovations of AI with the best of decades of compliance expertise.

## NILS™ AI Assist, powered by Expert AI

NILS™ AI Assist, Expert AI capabilities is an AI-powered research tool built into the trusted NILS INsource® platform, designed for insurance compliance professionals. It replaces traditional keyword search with conversational queries, delivering fast, accurate, and citation-backed responses from over 600,000 curated regulatory documents. Using proprietary large language models and retrieval-augmented generation, it seamlessly leverages the power of the NILS proprietary taxonomy of over 5,000 insurance-focused terms and concepts.

NILS AI Assist, powered by Expert AI natural language questions and answers, summaries, and team collaboration help users streamline research and reduce manual effort. With enterprise-grade privacy, no customer data is used for training and every answer links directly back to NILS INsource, enabling additional research activity and ensuring transparency and trust.

## Key capabilities

Deliver relevant answers with conversational AI using semantic search and natural language queries.

Provide on-demand summaries of any INsource content.

Help users build better questions with a prompt library and guided workflows.

Support collaborative, persistent research with session memory and team threads across users.

Export results for analysis, tracking, and internal compliance documentation.

Ensure enterprise-grade privacy so customer data is never used for AI model training.

Provide citation-backed responses with full traceability to INsource documents for verification.

Apply personalized filters based on jurisdiction, function, and line of business.

Enable seamless access to additional trusted regulatory content sets, including NILS Market Conduct and NILS Matrices, through integration with NILS INsource.
