

# iLien Filing Assistant powered by Expert AI Drag. Drop. File.

A smarter way to complete UCC filings

iLien Filing Assistant transforms manual Uniform Commercial Code (UCC) filing into a simple, document-driven workflow. Instead of rekeying data from long, inconsistent loan agreements, the files simply get uploaded, and the AI assistant extracts all required UCC-1 details, prepopulates the forms, and guides the filer through a quick review. No integrations, no complexity, no bottlenecks.

iLien Filing Assistant handles the heavy lifting, reduces risk, and keeps your team moving confidently and quickly.

## Key benefits

### Automated data extraction

Reads loan documents or security agreements and auto-fills debtor names, secured parties, addresses, collateral descriptions, and jurisdiction details — no more manual retyping.

### Instant jurisdiction recommendations

Analyzes debtor information to suggest the correct filing state, reducing misfilings and helping ensure lien perfection.

### Significant time savings

Cuts filing prep time, especially on long collateral descriptions, so your team processes more filings with less effort.

### Built-in quality check

Flags missing, unreadable, or ambiguous data — helping avoid costly rejections.

### Human-in-the-loop control

Review, adjust, and approve the AI generated filing before submitting.

### No IT needed

Works as a standalone feature, simply upload a document. No programming, Loan Origination System (LOS) integrations, or technical setup required.

### Document-driven filing workflow

Just upload the document, let the agent auto-populate the form, review, and submit.

**50%** faster filing than manual workflows\*

**80%** faster filing when prior UCCs, amendments, or lapsed filings apply\*
