

iLien Filing Assistant powered by Expert AI Drag. Drop. File.

A smarter way to complete UCC filings

iLien Filing Assistant transforms manual Uniform Commercial Code (UCC) filing into a simple, document-driven workflow. Instead of rekeying data from long, inconsistent loan agreements, the files simply get uploaded, and the AI assistant extracts all required UCC-1 details, prepopulates the forms, and guides the filer through a quick review. No integrations, no complexity, no bottlenecks.

iLien Filing Assistant handles the heavy lifting, reduces risk, and keeps your team moving confidently and quickly.

Key benefits

Automated data extraction

Reads loan documents or security agreements and auto-fills debtor names, secured parties, addresses, collateral descriptions, and jurisdiction details — no more manual retyping.

Instant jurisdiction recommendations

Analyzes debtor information to suggest the correct filing state, reducing misfilings and helping ensure lien perfection.

Significant time savings

Cuts filing prep time, especially on long collateral descriptions, so your team processes more filings with less effort.

No IT needed

Works as a standalone feature, simply upload a document. No programming, Loan Origination System (LOS) integrations, or technical setup required.

Built-in quality check

Flags missing, unreadable, or ambiguous data — helping avoid costly rejections.

Human-in-the-loop control

Review, adjust, and approve the AI generated filing before submitting.

Document-driven filing workflow

Just upload the document, let the agent auto-populate the form, review, and submit.

50% faster filing than manual workflows*

80% faster filing when prior UCCs, amendments, or lapsed filings apply*

*Based on Wolters Kluwer data
