

CT[®] hCue[®] Entity Management System

Turn entity and compliance data into action

A connected foundation for confident entity management

Bring entity management, compliance visibility, intelligent document workflows, and secure connectivity together in one platform. hCue helps teams maintain trusted information, reduce manual effort, and put critical data to work across the business.

Trusted Data

Create a central, secure source for entity, governance, compliance, and document information.

- Organize complex structures
- Control access by role
- Support audit and reporting needs

Smarter Workflows

Move from repetitive tasks to faster, more consistent document and governance work.

- Reduce manual entry
- Improve searchability
- Keep users in review and control

Connected Systems

Extend trusted hCue information into the applications and workflows your teams already use.

- Reduce duplicate entry
- Improve system handoffs
- Support scalable integration

Product features designed for the way your business works

Entity management designed by compliance professionals, for compliance professionals

Centralized Entity Management

Manage active, inactive, domestic, foreign, and global entities in one platform. Capture company-specific information with customizable fields.

Compliance Visibility

Create filing calendars for annual reports, registrations, licenses, permits, and other date-driven requirements. Receive available updates from CT to help keep records current.

Access and Security

Use role-based access to control how information is shared. Optional single sign-on supports streamlined access and security.

Document and Signature Workflows

Manage digital documents, e-signatures, and evidence storage with DocuSign integration.

Dynamic Org Charts

Build current, point-in-time, and what-if org charts. Use Chart Books to segment larger, detailed structures.

Implementation and Support

Begin with an assessment and data audit, then configure hCue to fit your organization. Ongoing support helps align the platform with your processes and workflows.

CT[®]

by Wolters Kluwer

Work faster. Stay in control. Connect what matters.

hCue Expert AI capabilities and hCue Bi-directional APIs

Intelligent capabilities built into the workflows that matter most

Turn documents into structured records, create governance content faster, and exchange information securely across systems.

hCue Expert AI Document Extract

Turn documents into structured business data.

Upload one or multiple supported documents and receive AI-proposed metadata and concise summaries. Review, edit, omit, or confirm recommendations before saving.

- Reduce repetitive metadata entry and transcription effort
- Improve document organization and searchability
- Maintain human review and control before data is saved

hCue Expert AI Document Create

Create governance documents faster.

Combine entity intelligence, governance templates, reusable prompts, and generative AI to create tailored first drafts in minutes, then review, edit, save, copy, or download.

- Start with stronger, entity-specific first drafts
- Improve consistency across governance content
- Generate documents for multiple entities from one prompt

hCue Bi-directional APIs

Put trusted hCue data where work happens.

Securely connect hCue with external business applications so authorized systems can exchange entity, governance, compliance, and document information.

- Reduce duplicate entry and manual handoffs
- Improve information flow across business systems
- Support secure, scalable enterprise connectivity

Put trusted information to work across your business.

See how hCue can help your teams reduce manual work, improve consistency, and move with confidence.
