

CT[®] hCue[®] Bi-directional APIs

**Connect Your Systems.
Put Trusted Data to Work.**

Securely exchange data between hCue and the business applications your teams use every day.

hCue Bi-directional APIs connect hCue with external systems so critical entity, governance, compliance, and document information can move securely across workflows. Reduce duplicate entry, simplify handoffs, and make trusted information available where work happens.

**Secure connectivity. Less manual work. Smoother handoffs.
More connected workflows.**

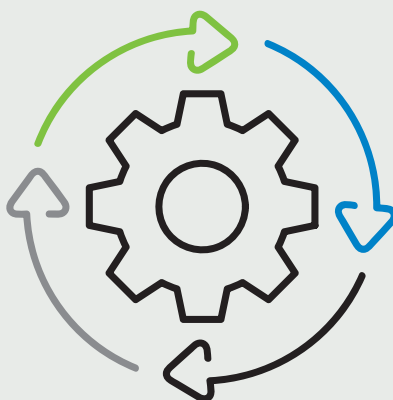

Connect with Confidence

- Securely connect hCue with authorized business applications
- Support enterprise integration and controlled access
- Extend trusted hCue information across your technology ecosystem

Put Information Where Work Happens

- Exchange entity, governance, compliance, and document information
- Make hCue information available in broader business workflows
- Improve access to trusted information across systems

Key benefits at a glance

Reduce Manual Work

- Minimize duplicate entry across systems
- Reduce manual movement of data and documents
- Create smoother system-to-system handoffs

Support a More Scalable Ecosystem

- Integrate hCue with your existing technology environment
- Support enterprise IT, integration teams, and platform administrators
- Build connectivity around evolving business needs

CT[®]

by Wolters Kluwer
