Technology can be complicated. Companies require a wide range of systems to manage legal and risk-related information and processes across the enterprise. The result is often a complex technology portfolio that is expensive, difficult to evolve as an organization’s needs change, and hard for staff to learn and use. This complex technology infrastructure also hinders reporting and visibility across an organization and its legal and enterprise-wide risk.

The solution is Passport, the industry’s most powerful technology platform for enterprise legal management. Passport enables organizations to connect all systems that support legal and risk-related activities through a single, secure, and collaborative ecosystem. This simplifies the way that staff work, enhances collaboration, and drives down the total cost of ownership (TCO) of systems. It also empowers organizations to use data from across systems and departments to manage legal risk more strategically, holistically, and proactively and better protect their company.

Each Passport ELM ecosystem is tailored for a client’s unique needs using the Passport platform, Passport applications, and Passport modules, as well as integrated software from the ELM Solutions, global partner network. The ability to seamlessly combine Passport with partners’ complementary enterprise software systems allows clients to take a best-in-class approach to enterprise software selection as they build a total ELM ecosystem and evolve it as business needs change.

The power of Passport

- Single workspace provides access to all essential information and resources via a simple, intuitive user interface.
- Consolidation of systems onto a single platform ensures that they work together seamlessly and facilitates integrated reporting and workflow across systems and departments.
- Centralization of data and documents, plus the Collaboration Portal, enable secure, efficient collaboration internally and with law firms and other external business partners.
- Powerful toolkits enable clients and partners to quickly make configuration changes or extend Passport to meet emerging business needs.
- Advanced platform technology connects systems to deliver total ELM ecosystems comprised of best-in-class software.

“We selected Passport because it proved to be the only platform with the comprehensive capabilities to meet our current requirements and easily evolve to support our future needs.”

- Walmart
**The industry’s most advanced technology platform**
- Flexibility to meet a variety of corporate IT standards
- Platform leverages open, mainstream technologies, rather than requiring experience with proprietary programming languages
- Security model and administration tools extend across all platform applications
- Robust toolset for administration, configuration, and development
- Common platform assets provide reusable technology for new application development
- Platform supports scalability and redundancy through additional hardware without compromising performance
- Integrated web services and developer APIs allow for integration with other systems

**Business benefits**
- Simplify how your staff work
- Gain visibility across all of your data to enable more strategic decisions
- Improve internal and external collaboration
- Adapt your systems as your needs change
- Take a best-in-class approach to enterprise software selection

**IT benefits**
- Reduce system support costs and improve support efficiency
- Drive down the TCO of legal and claims systems
- Adapt systems on your own to meet new business needs
- Support the needs of a global and mobile workforce

“Passport will provide a legal technology infrastructure that supports both our near-term operational needs, as well as allows us to evolve the system to support long-term legal strategy.”

- United Airlines
