

# iLien UCC APIs

Seamlessly integrate with iLien to enable faster search and filing, eliminate manual data rekeying, and reduce cost

## Business challenge

Searching and filing UCCs is a crucial part of lien perfection, but assembling that information, and rekeying it multiple times is a drain on time and resources. Working between multiple systems, gathering data from external sources, rekeying data into one system, and then copying that data back to another system results in decreased employee productivity, higher risk of data entry errors, and delays in closing loans.

## iLien UCC APIs

iLien UCC APIs allow for the seamless transfer of data between iLien and your current system. Use your existing lending system to define your workflows and make changes as necessary. You can benefit from an end-to-end automated solution that integrates loan processing with lien processing to optimize your workflows.

## Interface types

**Search interface:** Easily query UCC and/or corporate name information and push the search results directly to your lending system.

UCC search interface

Corporate name verification (CNV) interface

*\*Additional types of search available; speak with your sales rep for full list*

**UCC filing interface:** Integrate your lending system with our UCC filing services. Our pre-built, plug-and-play modules are compatible with many of the most popular systems on the market. Additionally, we have a best-in-class professional services team who can partner with your development team to assist with a custom interface solution that can integrate with proprietary lending systems.

Support both UCC-1 & UCC-3 filing with this interface

Backend image extraction interface: Export UCC filing images for automatic import to your lending system.

Lien Solutions APIs automate your proprietary systems or commercial off-the-shelf lending system by seamlessly integrating with iLien UCC filing and iLien search.

## Benefits

## Key features

- Modern design in the form of microservices that are resilient to component failure and easier to scale to fit business needs
- Representational State Transfer (RESTful) APIs implemented in JSON that are fast, lightweight, and scalable
- Highly secure authentication and authorization backed by the Open Authorization (OAuth) 2.0 standard to access restricted resources
- Dedicated interface support team to provide consultative assistance throughout development process and post-launch support
- Uses the Hypertext Transfer Protocol Secure (HTTPS) encryption for secure communication between systems
- Comprehensive list of APIs for various searches and filings of UCC records during the loan origination lifecycle
- Rich documentation including the API specification, integration guide, and plenty of sample codes
- A dedicated testing environment for API testing before the official integration

## How to get started

The process to get started depends on the interface type you want and the capabilities of your lending system. If your system can “plug & play” into an existing interface that has already been integrated with iLien, then it’s possible to get connected in just a few days. Please contact your account representative to learn if your lending system interface qualifies for a “plug & play” connection.

For a custom integration, contact Lien Solutions to complete a non-disclosure agreement (NDA) and gain access to our API documentation. Once a statement of work (SOW) is signed, Lien Solutions will provide the credentials necessary to access our API in a sandbox environment.

## The value of collaboration with Lien Solutions

When you work with the Wolters Kluwer Lien Solutions Professional Services team, you benefit from industry-leading professionals ready with automated tools and expert knowledge. We seamlessly implement our services with minimal disruption to your core business activity, so you realize time and cost savings more quickly.

---

## Customer success story

A national financial institution integrated the iLien UCC filing API in less than 2 months with one fully dedicated resource.

**Implementation:** Our customer went from a manual process to a fully automated workflow—where they can file UCCs directly from within their loan system—in just six weeks.

### Benefits:

- Immediate 25% gain in process efficiency and 20% reduction in data entry errors
- Seamless integration removed the need to rekey lender information
- Single entry of data resulted in greater accuracy
- Loan processing team can use internal systems to perform filings
- Customer increased volume by 3x, enabling divisional team to meet growing demand
- Reduced manpower needed to file liens allowed for increase in customer-facing activities

Gain efficiencies and increase productivity by seamlessly integrating your lending system to iLien. To learn more, contact your account manager or call **+1.800.833.5778**.
