Concept Definitions with Exemplars

Concept	Definition	Exemplars
Accountability	Accountability is internalized responsibility, whereby an individual agrees to be morally responsible for the consequences of their actions. The nurse is accountable for the care provided to clients and the responsibilities associated with being a professional (Marquis & Huston, 2024).	<ul style="list-style-type: none">• Competence• Professional Development
Acid-Base	Acid-base refers to the balance of hydrogen and bicarbonate ions within the body (the acidity and alkalinity of body fluids). An arterial blood gas (ABG) analysis is used to determine blood pH, and homeostatic mechanisms regulate acid-base levels to keep the pH within a normal range. Acid-base imbalances occur when the pH of the blood falls outside the range 7.35 to 7.45. These imbalances can be respiratory or metabolic in origin. Managing acid-base balance is an important role of the nurse, especially in high-acuity settings (Norris & Tuan, 2020).	<ul style="list-style-type: none">• Acid-Base Balance• Respiratory and Metabolic Acidosis• Respiratory and Metabolic Alkalosis
Addiction	Addiction is a chronic disease marked by compulsive seeking and use of a drug, despite the harm that it causes (Taylor, 2023).	<ul style="list-style-type: none">• Alcohol Use• Nicotine Use• Opioid Use• Perinatal Substance Use• Substance Use
Advocacy	Advocacy is helping others to grow and self-actualize by informing them of their rights and being sure that they have sufficient information on which to base their decisions. In particular, the nurse advocates for the vulnerable, as well as for the nursing profession. (Huston, 2024).	<ul style="list-style-type: none">• Nurse and Caregiver Fatigue• Patient-Centered Care• Patients' Rights• Protecting Vulnerable Populations• Protector
Anxiety	Anxiety is a vague feeling of dread or apprehension, in response to external or internal stimuli that can have behavioral, emotional, cognitive, and physical symptoms (Videbeck, 2023).	<ul style="list-style-type: none">• Generalized Anxiety Disorder• Obsessive-Compulsive Disorder• Panic Disorder• Phobias
Assessment	Assessment is the systematic and continuous collection, analysis, validation, and communication of patient data, or information. These data reflect how health functioning is enhanced by health promotion or compromised by illness and injury (Taylor, 2023).	<ul style="list-style-type: none">• Assessing Abnormal• Assessing Normal• Holistic Health Assessment• Across the Life Span

Concept	Definition	Exemplars
Behaviors	Behaviors are lifestyle choices that affect one's health either positively or negatively, such as patterns of sleep, nutrition, and health promotion, as well as personal habits such as smoking and the use of illicit drugs, alcohol, and caffeine (Hinkle, Cheever, & Overbauch, 2022). Nurses caring for clients with maladaptive behaviors use therapeutic treatment modalities in an effort to reverse these actions.	<ul style="list-style-type: none"> • Addiction • Alcohol Abuse • Assaultive Behaviors • Nicotine Use • Perinatal Substance Abuse • Substance Abuse
Caring	Caring in nursing is a special way of being, knowing, and doing with the goal of protection, enhancement, and preservation of human dignity. Applied to daily nursing practice, caring is action and competencies that aim toward the good and welfare of others (Taylor, 2023). According to the American Association of Colleges of Nursing (AACN), the concept of compassionate care refers to the way nurses relate to others with empathy, as human beings, and is an essential principle of person-centered care (<i>The Essentials, April 2021</i>).	<ul style="list-style-type: none"> • Caring Behaviors • Patient-Centered Care
Caring Intervention	A caring intervention is an autonomous action based on scientific rationale that a nurse executes to benefit the patient in a predictable way related to the nursing diagnosis and projected outcomes (Taylor, 2023).	<ul style="list-style-type: none"> • Blood Transfusion • Central Lines • Chest Tubes • CNA I Skills • Enemas • Foley Catheterization • Gastrostomy (G) Tubes • Holistic Physical Assessment Including Vital Signs • IV Medications • Medication Administration • Mobility Techniques • Nasogastric (NG) Tubes • Nasopharyngeal/Oral Suctioning • Personal Hygiene • Starting an IV • Sterile Technique • Tracheostomy Care (Suctioning) • Wound Care: Ostomy, Surgical, Pressure
Cellular Regulation	Cellular regulation is the coordinated function of thousands of physiologic control systems within the body to maintain homeostasis under conditions of change in the internal and external environment (Norris & Tuan, 2020).	<ul style="list-style-type: none"> • Anemia • Breast Cancer • Cancer • Cancer Survivorship • Colon Cancer • Leukemia • Lung Cancer • Prostate Cancer • Sickle Cell Anemia • Skin Cancer

Concept	Definition	Exemplars
Clinical Decision Making	Clinical decision making is the process a nurse uses to think about patient problems in the clinical setting (Taylor, 2023).	<ul style="list-style-type: none"> • Critical Thinking • Decision Making • Nursing Process • Problem Solving
Clotting	Clotting is the process whereby platelets circulating in the bloodstream collect at the site of vascular injury, form a plug, activate coagulation factors in the blood plasma, and initiate the formation of a stable clot composed of fibrin to prevent excessive blood loss following trauma (Hinkle, Cheever, & Overbauch, 2022).	<ul style="list-style-type: none"> • Blood Products • Deep Vein Thrombosis (DVT) • Disseminated Intravascular Coagulation (DIC) • HELLP Syndrome • Hemophilia
Cognition	Cognition is the brain's ability to process, retain, and use information. Cognitive abilities include reasoning, judgment, perception, attention, comprehension, and memory. These cognitive abilities are essential for many important tasks, including making decisions, solving problems, interpreting the environment, and learning new information (Videbeck, 2023).	<ul style="list-style-type: none"> • Alzheimer's Disease/Dementia • Confusion • Delirium • Schizophrenia
Collaboration	Collaboration is functioning effectively within nursing and interprofessional teams, fostering open communication, mutual respect, and shared decision making to achieve quality patient care (Taylor, 2023).	<ul style="list-style-type: none"> • Case Management • Chain of Command • Conflict Resolution • Interdisciplinary Communication • Interdisciplinary Teams • Management Theories
Comfort	Comfort refers to measures intended to relieve a patient's pain. Sometimes, pain relief is the only goal of nursing. (Taylor, 2023).	<ul style="list-style-type: none"> • End-of-Life Care • Fatigue • Fibromyalgia • Pain: Acute & Chronic • Sleep-Rest Disorders
Community-Based Practice	Community-based practice is healthcare provided to people who live within a defined geographic area. Sites include neighborhood clinics, patients' homes, long-term care facilities, schools, churches, and prisons. Community-based practice centers on individual and family healthcare needs. It emphasizes the provision of comprehensive, coordinated, and continuous services for patients with acute or chronic health problems (Taylor, 2023).	<ul style="list-style-type: none"> • Immunizations • Injury/Illness Prevention
Communication	Communication is the process that people use to exchange information, in which they simultaneously send and receive messages both verbally and nonverbally (Videbeck, 2023).	<ul style="list-style-type: none"> • Assertive Communication • Documentation • Group Process • Reporting • Therapeutic Communication

Concept	Definition	Exemplars
Critical Thinking	Critical thinking is an approach to thinking that is systematic, purposeful, exacting, disciplined, comprehensive, based on intellectual standards, and, as a result, well-reasoned (Taylor, 2023).	<ul style="list-style-type: none"> • Clinical Decision Making • Concept Mapping
Culture	Culture is a shared system of beliefs, values, and behavioral expectations that provides social structure for daily living. Culture influences roles and interactions with others, as well as within families and communities, and is apparent in the attitudes and institutions unique to particular groups (Taylor, 2023).	<ul style="list-style-type: none"> • Acculturation • Cultural Sensitivity/Multiculturalism • Discrimination • Health/Healthcare Disparity • Religion • Stereotyping • Values and Beliefs
Development	Development is an orderly pattern of changes in structure, thoughts, feelings, or behaviors resulting from maturation, experiences, and learning. Development is a dynamic and continuous progresses as the individual progresses through life, characterized by a series of ascents, plateaus, and declines (Taylor, 2023).	<ul style="list-style-type: none"> • Attention Deficit Hyperactivity Disorder (ADHD) • Autism • Cerebral Palsy • Down Syndrome • Failure to Thrive
Diversity	Diversity is the coexistence of different ethnic, sex assigned at birth, racial, and socioeconomic groups within one social unit. These groups include, but are not limited to, people of varying religion, language, physical size, sexual orientation, age, disability, occupational status, and geographic location (Taylor, 2023).	<ul style="list-style-type: none"> • Abilities • Age • Gender • Individual Life Experiences • Race • Sexual Orientation • Vulnerable Populations
Elimination	Elimination is the removal of waste products from the body through the skin, lungs, kidneys, and intestines via the processes of perspiration, expiration, urination, and defecation (Taylor, 2023).	<ul style="list-style-type: none"> • Benign Prostatic Hypertrophy (BPH) • Bladder Incontinence and Retention • Bowel Incontinence • Constipation/Impaction • Irritable Bowel Disease • Kidney Stones
End of Life	End of life refers to the processes of dying and the care required by those who are approaching death (Hinkle, Cheever, & Overbauch, 2022).	<ul style="list-style-type: none"> • Organ Donation • Pediatric End-of-Life Care • Persistent Vegetative State (PVS)

Concept	Definition	Exemplars
Ethics	Ethics is a systematic study of principles of right and wrong conduct, virtue and vice, and good and evil as they relate to conduct and human flourishing (Taylor, 2023).	<ul style="list-style-type: none"> • ANA Code of Ethics • Ethical Dilemmas • Ethical Principles • ICN Code of Ethics • Patient Confidentiality • Patient Rights
Evidence-Based Practice	Evidence-based practice in nursing is a problem-solving approach to making clinical decisions, using the best evidence available (considered “best” because it is collected from sources such as published research, national standards and guidelines, and reviews of targeted literature) (Taylor, 2023).	<ul style="list-style-type: none"> • Best Practices • Community Preferences • Develop a Question • Identifying Clinical Questions • Individual Preferences • Patient Care Guidelines
Family	Family is any group of people who live together and depend on one another for physical, emotional, and financial support (Taylor, 2023).	<ul style="list-style-type: none"> • Aging of Family Members • Community Support • Expanding Family • Family Dynamics • Family Response to Health Alterations • Family Response to Health Promotion • Family Structure and Roles • Family-Centered Care
Fluids & Electrolytes	Fluid and electrolyte balance refers to the body’s maintaining of homeostasis of fluid volume and electrolytes by a number of mechanisms that facilitate fluid and electrolyte movement within the body, including organs and body systems, osmosis, diffusion, active transport, and capillary filtration (Taylor, 2023).	<ul style="list-style-type: none"> • Acute Renal Failure • Chronic Renal Failure • Electrolyte Balance • Fluid Balance • Gastroenteritis • Shock
Functional Ability	Functional ability is a person’s ability to perform activities of daily living (ADLs) and instrumental activities of daily living (IADLs). ADLs are those self-care activities that the patient must accomplish each day to meet personal needs; they include personal hygiene/ bathing, dressing/grooming, feeding, toileting, and transferring. Many patients cannot perform such activities easily. IADLs include those complex skills needed for independent living, including meal preparation, grocery shopping, household and financial management, medication management, telephone usage, and transportation (Hinkle, Cheever, & Overbaugh, 2022).	<ul style="list-style-type: none"> • Activities of Daily Hygiene • Personal Hygiene

Concept	Definition	Exemplars
Grief & Loss	Grief is an internal emotional reaction to loss, such as caused by separation or by death. Loss occurs when a valued person, object, or situation is changed or becomes inaccessible such that its value is diminished or removed. Normal expressions of grief may be physical (crying, headaches, difficulty sleeping, fatigue), emotional (feelings of sadness and yearning), social (feeling detached from others and isolating yourself from social contact), and spiritual (questioning the reason for your loss, the purpose of pain and suffering, the purpose of life and the meaning of death) (Taylor, 2023).	<ul style="list-style-type: none"> • Anticipatory Grieving • Children's Response to Loss • Death and Dying • Elder's Response to Loss • Perinatal Loss • Response to Loss Across the Life Span • Situational Loss
Health Policy	Health policy refers to the laws that a nation establishes to govern the delivery of healthcare to its people. Nurses can influence legislation on healthcare by active participation in professional organizations and by individual and group lobbying of legislators (Huston, 2024).	<ul style="list-style-type: none"> • Access to Healthcare • Accrediting Bodies (TJC) • Healthy People 2020/2030 • Professional Organizations • Regulatory Agencies (OSHA, Licensure, DHHS, DHR) • Types/Systems of Reimbursement
Health Promotion	Health promotion is the behavior of an individual motivated by a personal desire to increase well-being and health potential (Taylor, 2023).	<ul style="list-style-type: none"> • Exercise • Immunizations • Injury/Illness Prevention • Nutrition • Screening
Health, Wellness, & Illness	Health is a state of optimal functioning or physical, mental, and social well-being. Wellness is an active state of being healthy, including living a lifestyle that promotes good physical, mental, and emotional health. Illness is the response of a person to a disease, an abnormal process in which the person's level of functioning is changed when compared with a previous level (Taylor, 2023).	<ul style="list-style-type: none"> • Adjustment to Health and Illness • Alternative Therapies • Consumer Education/Prevention • Exercise • Health Beliefs (Individual/Cultural) • Hospitalized Individual • Immunizations • Lifestyle Choices • Normal Sleep and Rest Patterns • Nutrition • Oral Health • Physical Fitness • Psychosocial Response to Illness • Screening • Self-Management • Wellness-Illness Continuum
Healthcare Disparities	Healthcare disparities are differences in health outcomes between populations that are closely associated with a social, economic, or environmental disadvantage influenced by such factors as race and ethnicity, poverty, biological sex, age, mental health, educational level, disabilities, sexual orientation, health insurance, and access to healthcare (Taylor, 2023).	<ul style="list-style-type: none"> • Access to Healthcare • Homelessness • Social Determinants of Health • Socioeconomic Status • Veterans

Concept	Definition	Exemplars
Healthcare Systems	A healthcare system is the system a nation uses to deliver and pay for healthcare for its inhabitants (Taylor, 2023).	<ul style="list-style-type: none"> • Access to Healthcare • Allocation of Resources • Diagnosis-Related Groups (DRGs) • Disaster and Emergency Preparedness • Nursing Care Delivery Systems • Primary, Secondary, and Tertiary Care • Resource Utilization
Immunity	Immunity is the body's specific protective response to a foreign agent or organism (Hinkle, Cheever, & Overbauch, 2022). The nurse must be knowledgeable regarding active and passive immunity, as well as the effects of alterations in immune function for clients receiving care.	<ul style="list-style-type: none"> • Anaphylaxis • HIV/AIDS • Hypersensitivity • Immune Response • Lupus • Rheumatoid Arthritis • Transplant Rejection
Infection	Infection is the presence and multiplication of a microorganism within another living organism, with subsequent injury to the host (Norris & Tuan, 2020).	<ul style="list-style-type: none"> • Antibiotic-Resistant Infection • Cellulitis • Conjunctivitis • Influenza • Meningitis • MRSA • Nosocomial Infection • Otitis Media • Pneumonia • Septicemia • Tuberculosis (TB) • Urinary Tract Infection (UTI)
Inflammation	Inflammation is a complex nonspecific response to tissue injury intended to minimize the effects of injury or infection, remove the damaged tissue, generate new tissue, and facilitate healing (Norris & Tuan, 2020).	<ul style="list-style-type: none"> • Appendicitis • Bronchitis • Celiac Disease • Gallbladder Disease • Gastroesophageal Reflux Disease (GERD) • Hepatitis • Inflammation Process • Inflammation Response • Inflammatory Bowel Disorders and Diseases • Nephritis • Pancreatitis • Peptic Ulcer Disease (PUD)

Concept	Definition	Exemplars
Informatics	Informatics is the science of using of technology and data to improve patient care. It is driving innovation and defining future approaches to information and knowledge management in biomedical research, clinical care, and public health (Taylor, 2023)	<ul style="list-style-type: none"> • Clinical Decision Support Systems • Computer-Based Reminder Systems • Computers in Healthcare Organizations • Electronic Health Records • Individual Information at Point of Care
Intracranial Regulation	Intracranial regulation refers to compensatory mechanisms in the brain that operate to maintain pressure within the cranial cavity in a safe range (0 to 15 mm Hg). Reciprocal compensation occurs among the three intracranial compartments such that small increases in the volume of one component can be compensated for by a decrease in the volume of one or both of the other two components, as CSF and blood can shift and brain tissue comply (Norris & Tuan, 2020).	<ul style="list-style-type: none"> • Increased Intracranial Pressure • Seizures • Traumatic Brain Injury
Leadership/ Management	Leadership is the process of persuading and influencing others toward a goal through mostly noncoercive means; typically composed of a wide variety of roles. Management is the process of leading and directing all or part of an organization through the deployment and manipulation of resources (Huston, 2024).	<ul style="list-style-type: none"> • Cost-Effective Care • Delegation • Interdisciplinary Collaboration • Leadership Principles • Mentoring • Skills/Personal Traits • Workplace Goals
Legal Issues	Legal issues involve legislation and laws that are in place to protect the client and the nurse. Laws and legislation define the scope of acceptable practice and protect individual rights. Nurses who are aware of their rights and duties in legal matters are better able to protect themselves against liability or loss of professional licensure. The boundaries for nursing practice are defined in the Nurse Practice Act of each state. The nurse must practice within these prescribed boundaries, as well as be aware of what constitutes malpractice or professional negligence. Other legal issues that nurses must understand are related to informed consent, documentation, incident reporting, the Patient Self-Determination Act, and licensure (Huston, 2024).	<ul style="list-style-type: none"> • Advance Directives • Civil Law • Criminal Law • Duty to Care • HIPAA • Licensure • Nursing Practice Act • Obligation to Report • Professional/ Unprofessional Conduct • Risk Management • Whistle Blowing
Managing Care	Managing care is required of all nurses, even new graduates, as it begins with the care of individual clients. Nurses become proficient in performing and directing client care, and then begin to visualize the activities involved in managing the work environment and, finally, the larger organization. Nurses who excel in managing client care and possess strong interpersonal skills often assume additional management duties when assigned the role of charge nurse or nurse manager (Taylor, 2023).	<ul style="list-style-type: none"> • Care Coordination • Community-Based Nursing Care • Cost-Effective Care • Delegation • Perioperative Care • Prioritizing Individual Care

Concept	Definition	Exemplars
Medical Emergencies	The assessment and treatment of acute injury or illness that poses an immediate risk to a client's life or long-term health (Source: ACCS Nursing Philosophy and Concept Curriculum Map, 2/16/2016).	<ul style="list-style-type: none"> • Anaphylaxis • Aneurysms • Burns • Multiple Organ Dysfunction Syndrome (MODS) • Poisonings • Septicemia • Submersion Injuries • Traumatic Brain Injury
Metabolism	Energy metabolism refers to the chemical processes involved in converting carbohydrates, fats, and proteins from the foods we eat into the energy needed for cell functions (Norris & Tuan, 2020).	<ul style="list-style-type: none"> • Addison's Disease • Diabetes • Gestational Diabetes • Liver Disease • Obesity • Osteoporosis • Syndrome of Inappropriate Antidiuretic Hormone (SIADH) • Thyroid Disease
Mobility	Mobility is the range of motion available at a joint or the ability of a person to move, in general. Mobility may be restricted owing to pain, paralysis, loss of muscle strength, systemic disease, an immobilizing device (e.g., cast, brace), or prescribed limits to promote healing. Assessment of mobility includes positioning, ability to move, muscle strength and tone, joint function, and the prescribed mobility limits (Hinkle, Cheever, & Overbauch, 2022).	<ul style="list-style-type: none"> • Back Problems • Fractures • Hip Fractures • Mobility Techniques • Multiple Sclerosis • Osteoarthritis • Parkinson's Disease • Range of Motion (ROM) • Spinal Cord Injuries
Mood & Affect	Mood refers to the client's pervasive and enduring emotional state. Affect is the outward expression of the client's emotional state (Videbeck, 2023).	<ul style="list-style-type: none"> • Bipolar Disorder • Depressive Disorders (Including Postpartum Depression) • Schizophrenia
Nursing Process	The nursing process, a major guideline for nursing practice, consists of the essential activities of assessing, diagnosing, planning, implementing, and evaluating. The nursing process is used by the nurse to identify the patient's healthcare needs and strengths, establish and carry out a plan of care to meet those needs, and evaluate the effectiveness of the plan to meet established outcomes (Taylor, 2023).	<ul style="list-style-type: none"> • Assessment • Diagnosis (NANDA) • Evaluation • Intervention • Planning

Concept	Definition	Exemplars
Nutrition	Nutrition is the study of the nutrients and how they are handled by the body, as well as the impact of human behavior and environment on the process of nourishment (Taylor, 2023).	<ul style="list-style-type: none"> • Blood Glucose Monitoring • Eating Disorders • Enteral and Parenteral Nutrition • Gastroesophageal Reflux Disease (GERD) • Infant Nutrition • Malnutrition • Nasogastric (NG) Tubes • Nutritional Assessment
Oxygenation/ Gas Exchange	Oxygenation refers to the process of providing cells with oxygen through the respiratory system and is accomplished by pulmonary ventilation, respiration, and perfusion (Taylor, 2023). Nurses encounter potential and actual alterations in oxygenation in all types of clients and must detect problems and intervene early to prevent life-threatening complications.	<ul style="list-style-type: none"> • Acute Respiratory Distress Syndrome (ARDS) • Asthma • Chronic Obstructive Pulmonary Disease (COPD) • Cystic Fibrosis • Pneumothorax • Respiratory Assessment • Respiratory Syncytial Virus (RSV) • Sudden Infant Death Syndrome (SIDS)
Perfusion	Perfusion is the process by which oxygenated capillary blood passes through body tissues (Taylor, 2023). Adequate perfusion depends on normal functioning of both the respiratory and cardiac systems. Nurses encounter potential and actual alterations in perfusion in all types of clients and must detect problems and intervene early to prevent life-threatening complications.	<ul style="list-style-type: none"> • Angina • Arteriosclerosis • Cardiomyopathy • Circulatory Assessment • Coronary Artery Disease (CAD) • Deep Vein Thrombosis (DVT) • Disseminated Intravascular Coagulation (DIC) • Heart Failure • High Cholesterol • Hypertension (HTN) • Life-Threatening Dysrhythmias • Multiple Organ Dysfunction Syndrome (MODS) • Myocardial Infarction (MI) • Peripheral Vascular Disease (PVD) • Pregnancy-Induced Hypertension (PIH) • Pulmonary Embolism • Shock (Cardiogenic & Septic) • Stroke • Ventricular Septal Defect
Pharmacology	Pharmacology is the study of the biological effects of chemicals (Karch, 2023).	<ul style="list-style-type: none"> • Dosage Calculations • Management of Intravenous (IV) Therapy • Medication Administration

Concept	Definition	Exemplars
Professional Behaviors	Professional behaviors are those that reflect the nurse's commitment to secure the interests and welfare of those entrusted to the nurse's care. These behaviors flow out of the professional values of nursing, as identified by the American Association of Colleges of Nursing (2008): altruism, autonomy, human dignity, integrity, and social justice (Taylor, 2023).	<ul style="list-style-type: none"> • Accountability • Commitment to Profession • Leadership Principles • Professional Standards • Scope of Practice • Work Ethics
Psychosis	Psychosis refers to a cluster of symptoms including delusions, hallucinations, and grossly disordered thinking and behavior (Videbeck, 2023).	<ul style="list-style-type: none"> • Postpartum Psychosis • Schizophrenia
Quality Improvement	Quality improvement refers to activities that are used to evaluate, monitor, or regulate services rendered to clients (Huston, 2024).	<ul style="list-style-type: none"> • Accreditation • Benchmarking • Methods to Evaluate Client Care • Quality Improvement Cycle: Plan-Do-Study-Act • Reporting • Root Cause Analysis • Sentinel Events
Reproduction	Reproduction is the biological function of producing offspring and is essential for the survival of a species. It involves conception (the joining of the sperm from the male with the ovum from the female), development of the fetus within the uterus, and birth (Ricci, Kyle, & Carman, 2021).	<ul style="list-style-type: none"> • Antepartum Care/Prenatal Care • Assessment of the Pregnant Female • Intrapartum Care • Newborn Assessment • Newborn Care • Placental Abruption • Placenta Previa • Postpartum Care • Postpartum Hemorrhage (PPH) • Preeclampsia • Prematurity • Rh Incompatibility
Safety	Safety refers to being protected from potential or actual harm and is considered a basic human need. Patient safety is a responsibility of all healthcare providers, including nurses, and is a focus in all healthcare facilities as well as in the home, workplace, and community. Many safety and security concerns are universal for all age groups, but there are unique considerations for each developmental stage (Taylor, 2023).	<ul style="list-style-type: none"> • Anticipatory Guidance • Devices and Restraints • Environmental Control • Environmental Safety • Error Prevention • Falls and Fall Precautions • Hand-Off Communication • Injury/Illness Prevention • National Patient Safety Goals • Reporting • Responsible Sexual Behavior • SBAR Format • Standard Precautions

Concept	Definition	Exemplars
Self	Self describes a person's conscious sense of who they are (Taylor, 2023).	<ul style="list-style-type: none"> • Eating Disorders • Identity • Personality Disorders • Self-Esteem • Self-Perception and Body Image
Sensory Perception	Sensory perception is the conscious process of selecting, organizing, and interpreting data from the senses into meaningful information. Perception is influenced by the intensity, size, change, or representation of stimuli, as well as by past experiences, knowledge, and attitudes (Taylor, 2023).	<ul style="list-style-type: none"> • Cataracts • Eye Injuries • Glaucoma • Hearing Impairment • Macular Degeneration • Peripheral Neuropathy • Visual Impairment
Sexuality	A critical component of human identity and well-being, sexuality encompasses biological sex or sex assigned at birth, sexual activity (including pleasure, intimacy, and reproduction), gender identities and roles, and sexual orientation. It involves how a person both exhibits and experiences sexuality physically, emotionally, and mentally. Sexuality includes learned behaviors that affect how people respond to their own sexuality and how they behave in relationships with others. Cultural, biological, sociopolitical, legal, economic, religious, spiritual, and historical factors influence sexuality. Sexuality can be an integral part of a person's identity and is present in a person's demeanor through actions, communications, and physical appearance. (Taylor, 2023).	<ul style="list-style-type: none"> • Erectile Dysfunction • Family Planning and Preconception Care • Infertility Counseling • Menopause • Menstrual Dysfunction • Sexually Transmitted Diseases
Spiritual	Spirituality is anything that pertains to a person's relationship with a nonmaterial life force or higher power. Spiritual health or well-being is the condition that exists when the person's universal spiritual needs for meaning and purpose, love and belonging, and forgiveness are met (Taylor, 2023).	<ul style="list-style-type: none"> • Higher Consciousness • Morality • Religion • Spiritual Distress • Spiritual Health • Spiritual Well-Being • Spiritual/Ethical Caring • Spirituality
Stress & Coping	Stress is a condition in which the human system responds to changes in its internal or external environment that disrupt its normal balanced state and are perceived as a challenge, threat, or danger. Coping is any behavior that is used to decrease stress and anxiety. Many coping behaviors are learned, based on one's family, past experiences, and sociocultural influences and expectations. Coping behaviors may be positive or negative in terms of how they affect one's health (Taylor, 2023).	<ul style="list-style-type: none"> • Anxiety • Crisis • Generalized Anxiety Disorder • Obsessive-Compulsive Disorder • Panic Disorder • Phobias • Post-Traumatic Stress Disorder (PTSD)

Concept	Definition	Exemplars
Teaching & Learning	Teaching is a planned method or series of methods used to help someone learn. The person using these methods is the teacher. Learning is the process by which a person acquires or increases knowledge or changes behavior in a measurable way as a result of the experience. You assume the role of teacher and your patient assumes the role of learner when there are identifiable learning needs (Taylor, 2023).	<ul style="list-style-type: none"> • Consumer Education/Prevention • Diabetes Education • Mentor • Patient Education • Patient Educator • Patient Teaching • Staff Education
Technical Skills	Technical skills are the manual skills needed in nursing to handle equipment and perform procedures and other clinical activities with competence (Taylor, 2023).	<ul style="list-style-type: none"> • Blood Transfusions • Central Lines • Chest Tubes • Enemas • Enteral and Parenteral Nutrition • Foley Catheterization • IV Insertion • IV Medication • Medication Administration • Physical Assessment • Sterile Technique • Trach Care/Nasopharyngeal Suctioning • Wound Care
Therapeutic Communication	Therapeutic communication is an interpersonal interaction between the nurse and the client during which the nurse focuses on the client's specific needs to promote an effective exchange of information. Skilled use of therapeutic communication techniques helps the nurse understand and empathize with the client's experience (Videbeck, 2023).	<ul style="list-style-type: none"> • Change of Shift Report • Conflict Resolution • Counseling/Support • Documentation • Interdisciplinary Communication • Patient Education • Reporting
Thermoregulation	Thermoregulation is regulation of the body's temperature by cells in the hypothalamus in response to signals from thermal (heat and cold) receptors located close to the skin's surface. Stimulation of these receptors sends sensory messages to the anterior hypothalamus to initiate mechanisms to dissipate heat (through vasodilation and sweating) or to preserve warmth through vasoconstriction and piloerection ("goose bumps") (Taylor, 2023).	<ul style="list-style-type: none"> • Fever • Hyperthermia • Hypothermia • Multiple System Injury/Failure • Newborn Thermoregulation
Time Management/ Organization	Time management is making optimal use of available time. The keys to optimizing time management include prioritizing duties, managing and controlling crises, reducing stress, and balancing work and personal time (Huston, 2024).	<ul style="list-style-type: none"> • Care Coordination • Prioritizing Care

Concept	Definition	Exemplars
Tissue Integrity	Tissue integrity refers to the state of skin or other tissue when it is healthy and intact. When tissue is wounded, its normal integrity and continuity are disrupted and its function of protection is compromised, making it vulnerable to invasion by organisms (Taylor, 2023).	<ul style="list-style-type: none"> • Assessment of the Skin • Burns • Cellulitis • Contact Dermatitis • Pressure Ulcers • Psoriasis • Tinea Pedis • Wound Healing
Violence	The CDC's Injury Center defines violence as the "[international] use [of] physical force or power to harm others" (CDC, 2017; Ricci, Kyle, & Carman, 2021).	<ul style="list-style-type: none"> • Addiction • Alcohol Use • Assault/Homicide • Child Abuse • Elder Abuse • Intimate Partner Abuse • Rape-Trauma Syndrome • Sexual Abuse • Substance Abuse • Suicide • Unintentional Injury

Wolters Kluwer
