

BioDigitalXR

Experience the BioDigital Human in extended reality for the best experience in anatomy education.

Featuring 3D anatomy from the world's largest library of immersive anatomy, disease and treatment models, including complete male and female anatomy, regional and system anatomy 3D models, BioDigital's market leading platform powers extended reality content across any device, providing the most engaging anatomy education for your students. BioDigital XR simulates real world engagement, using virtual hands to manipulate anatomical structures and simulating real world experience.

A robust, intuitive VR experience combined with redesigned tools provide the optimal experience for new learners, allowing them to engage with body positioning as well as with modes that allow them to hide structures, peel away layers and view labels. Audio narration is ideal for learning Latin names in anatomy and to enhance the experience for those who prefer to listen. BioDigital XR keeps your account in sync with the BioDigital Human Web and mobile platform, providing access to the 3D library on any device, any time.

Why BioDigital XR?

- Provides a safe to fail learning experience for students across healthcare programs
- Proven to improve learning outcomes and increase engagement
- Makes spatial relationships for learners
- Enhances skill development
- Cost-effective complement to cadaver dissection

Device support: BioDigitalXR is compatible with the Meta Quest 2 and the HoloLens 2
