

BOWTIE DIALOGUE KIT

Discover risks and test alignment as you send all voices to the board.

SMARTER TOGETHER

To be successful with your barrier-based risk approach – and your bowtie thinking – is to save lives.

A successful bowtie implementation is more than just a good project delivery. It means that everybody looks at risks differently, and with far more nuance than just asking, “what could possibly go wrong?” It means going beyond the technicalities and beyond the usual loud voices. It means that everyone in the organization takes part.

In consequence, the quality of your implementation is dependent on the quality of your dialogues.

FOCUSED CONVERSATIONS

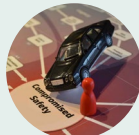

The BDK, the Bowtie Dialogue Kit, offers a simple and efficient way of allowing all voices to be heard as you focus on the most important risk here and now!

As you assemble the board and place your tokens, everybody around the table not only understands but **applies bowtie thinking** to the areas most in need of a good dialogue – before anything happens.

Together you discover and record the specific actions you wish to experiment with until next time you use the BDK to get a helicopter view of your project.

AS A BDK PARTICIPANT...

... you are likely to appreciate an engaging and meaningful process:

LET'S WORK TOGETHER

The BDK is a platform that only grows stronger by broader use, make it yours.

BlueBehavior has deployed programs all across the globe, and we welcome partnerships at almost any level – from turnkey to co-facilitation and scaling based on blended/remote train-the-trainer engagement.

Certain restrictions apply – like prior bowtie experience and fluent English, at least in the co-creation phases.
