

Datasheet**CCH® Tagetik IRRD Solution****Resolution reporting and recovery planning, ready for IRRD**

The Insurance Recovery and Resolution adds a mandatory obligation for insurers in the Solvency II perimeter: recovery and resolution planning for severe stress, with ITS-aligned templates, high data quality, and full traceability. It takes effect on 30 January 2027, with first reporting on FY2027. Most teams aren't set up for this, and data sits across systems.

The CCH® Tagetik IRRD Solution is a predefined module for insurance and reinsurance undertakings. It retrieves Solvency II entity data, balance sheet items, and technical provisions, applies embedded EIOPA validations and ITS-aligned calculations, and generates submission-ready XBRL-XML in one click. Pre-emptive recovery plans and narrative requirements sit in Intelligent Disclosure on the same platform, so you reach readiness without starting from scratch.

Reach IRRD readiness on the platform that already runs your Solvency II reporting**Reach readiness, end to end**

A predefined configuration covers resolution reporting from data collection to XBRL filing.

Populate standardized IRRD templates for organizational structure, liabilities, critical functions, relevant services, and financial market infrastructures.

Activate the process fast and hold continuous compliance readiness.

Align outputs to the EIOPA minimum set of standard forms and procedures.

Build on your Solvency II data

Retrieve Solvency II entity data, balance sheet items, and technical provisions directly.

Ingest data from any internal and external source into a pre-built data model.

Cut manual workload and prevent errors by reusing data you already hold.

Run IRRD on the same platform as Solvency II and the wider insurance suite.

Stay governed and audit-ready

Detect data quality issues automatically with embedded EIOPA business and technical validations.

Keep one source of truth across recovery, reporting, and resolvability.

Govern review and approval with clear roles, workflows, and end-to-end audit trails.

Respond to Resolution Authority requests, including ad-hoc ones, from a single platform.

“IRRD asks insurers to prove they can recover and be resolved, on a fixed deadline, with the rigor regulators already expect under Solvency II. The teams that handle it best will reuse the data and controls they already trust, keep resolution reporting ready all year, and answer ad-hoc requests without scrambling”

Grazia Cafagna
ESG & Regulatory Director
CCH Tagetik

Key benefits

- Continuous IRRD compliance readiness
- Less manual work, fewer validation errors
- One source of truth across recovery, reporting, and resolvability
- Full governance and auditability
- One-click XBRL-XML filing
- Built on your existing Solvency II investment

Addressing Common Challenges

- **Mandatory IRRD readiness on a fixed deadline**
Compliance is not optional for insurers in the Solvency II perimeter, and first reporting lands on FY2027. Teams need continuous readiness, fast process activation, and reliable use of existing data with full traceability.
- **Coordinating multiple functions**
Critical functions have to be prepared and aligned to guarantee business continuity through a resolution scenario, which pulls together people and data that usually sit apart.
- **Data correctness and consistency**
Submissions have to stay aligned to the ITS, with high data quality and consistency across templates, while avoiding validation errors that trigger re-work and re-submission.
- **Managing recovery plans and ad-hoc requests**
IRRD-compliant recovery plans combine quantitative and qualitative, narrative data. Resolution Authorities issue frequent ad-hoc requests, and inconsistency across recovery, reporting, and resolvability is a constant risk when data is hard to reuse over time

Key capabilities

- **Pre-built IRRD data model and integration.** A predefined model aligned to the EIOPA IRRD Data Point Model retrieves Solvency II entity data, balance sheet items, and technical provisions, so existing data is reused. It also ingests data from internal and external sources.
- **Embedded EIOPA data quality validations.** Business and technical validations aligned to the EIOPA rule set automatically detect data quality issues, and support efficient re-submission when material changes arise.
- **ITS-aligned calculations.** An embedded engine applies logic aligned with the IRRD ITS for key metrics: liability structure, critical functions values, and off-balance-sheet counterparties. Outputs stay regulatory-compliant and consistent.
- **Outputs and disclosure in one platform.** Generate regulatory-compliant XBRL-XML directly within the solution. Manage pre-emptive recovery plans and narrative requirements in CCH Tagetik Intelligent Disclosure, with governed workflows and end-to-end audit trails.

Data collection & integration	Data quality & validation	Calculations	Governance & workflow	Output & disclosure
Pre-built retrieval from Solvency II and the balance sheet, with ingestion of technical provisions and all new IRRD data.	Embedded EIOPA business and technical validations automatically detect data quality issues.	Embedded ITS-aligned logic computes key IRRD metrics: liability structure, critical functions, off-balance-sheet counterparties.	Governed review, approval, and audit trails support your responsibility for data accuracy.	One-click XBRL-XML, with Intelligent Disclosure for recovery plans and narrative requirements in one platform.

About Wolters Kluwer

Wolters Kluwer (EURONEXT: WKL) is a global leader in professional information, software solutions, and services for the healthcare, tax and accounting, financial and corporate compliance, legal and regulatory, and corporate performance and ESG sectors. We help our customers make critical decisions every day by providing expert solutions that combine deep domain knowledge with specialized technology and services. Wolters Kluwer reported 2022 annual revenues of €5.5 billion. The group serves customers in over 180 countries, maintains operations in over 40 countries, and employs approximately 20,000 people worldwide. The company is headquartered in Alphen aan den Rijn, the Netherlands.
