The Agricultural Law of the EU, Second Edition

René Barents

Considering that approximately one-third of the EU's budget is spent on agriculture – and that European legislation on agriculture is complex and sizable and case law is abounding – this well-structured and coherent elucidation will prove to be invaluable to any practitioner dealing with a case involving agriculture anywhere in the EU. The author's reflections on the meaning and significance of EU agricultural law will be highly appreciated by academics aware of the growing intricacy of the field.
