
Evidence-Based Health Collection

Ovid's Evidence-Based Health Collection (EBHC) brings together a useful and distinct collection of evidence-based content resources to provide clinicians, students and researchers access to the best available scientific information to guide clinical decisions and patient care.

Included in your collection:

KSR Evidence

The KSR Evidence database includes systematic reviews, meta-analyses, and select health technology assessment (HTA) reports published since 2015 and currently contains over 25,000 critical appraisals and over 200,000 systematic reviews.

KSR Evidence has been developed with the aim of helping users make sense of the ever-increasing volume and complexity of evidence, and provides a user-friendly, time-efficient way to access systematic reviews in healthcare.

- Find systematic reviews, meta-analyses and HTA reports from a wide range of healthcare resources
- Interpret the quality of a systematic review using our critical appraisals
- Apply information you need, when you need it, for point-of-care decisions

Critical appraisals use an adapted form of the ROBIS tool, with the overall rating and bottom line informing users at a glance of the main points and any shortcomings of the review and include full explanation of the ROBIS domain ratings, PICO, as well as a bottom line which summarises the main findings of the review.

ECRI Guidelines Trust® (EGT)

EGT is a comprehensive collection of evidence-based clinical practice guideline content, providing summaries and appraisals (TRUST Scorecards) of guidelines developed from systematic reviews. ECRI's TRUST Scorecards identify how the guidelines adhere to the National Academy of Medicine (Institute of Medicine) standards for trustworthiness.

A useful and distinct collection of evidence-based content resources.

Why choose Ovid's EBHC?

- Quick, easy access to critical appraisals, systematic reviews, guidelines and other evidence-based healthcare resources, together in one convenient package
- Regular updates to keep content current
- Searching evidence-based content across an array of resources
- Ovid's powerful search functionality and time saving workflow tools
- Includes content only available from Ovid

Collections continued on back →

EGT provides:

- **One-stop Resource for Trustworthy Clinical Practice Guideline Content**, eliminating the need to search multiple information sources and reducing research time.
- **Current Clinical Practice Content** published within the last 5 years. EGT is the only guideline network that has eligibility criteria for guidelines to be included in its collection. EGT does not represent, disseminate, or promote outdated or unsafe practices.
- **Objectively Vetted Clinical Practice Guidelines** by an unbiased, independent appraiser. As a nonprofit healthcare research organization, ECRI operates under some of the most stringent conflict-of-interest rules in the industry.
- **Longevity in Clinical Practice Guideline Appraisal and Dissemination:** ECRI has 25 years' experience in not only appraisal and dissemination, but in supporting federal and private organizations in their guideline development, methodology and process improvement initiatives.

Lippincott® Nursing Solutions Guideline Summaries

Lippincott Solution's team of clinical experts have reviewed, condensed, and extracted key information from lengthy practice guidelines and put them into streamlined, comprehensive guideline summaries. Use these guideline summaries to stay up to date on current recommendations supported by the latest evidence. Putting these guidelines into practice is instrumental in providing optimal care and improving patient outcomes.

Lippincott Nursing Guideline Summaries are closing the gap between interpretation and implementation of practice guidelines so healthcare providers have the most updated, essential information they need with these authoritative, evidence-based guideline summaries, saving healthcare providers much-needed time and energy reading and allowing these guidelines to be put into practice sooner.

Evidence-Based Practice – FPIN (Family Physicians Inquiries Network)

Evidence-Based Practice, a monthly journal focused on providing answers to some of the most important and common questions derived from patient care experiences and the newest practice changing medical literature.

Each issue includes collaborative content from practicing physicians, PharmDs, and behavioral health clinicians based on the best and/or most current evidence. Each meaningful, bite-sized article found in EBP aims at helping primary care clinicians and medical educators across the world become more effective in understanding and applying evidence-based medicine.
