

UpToDate for Life Sciences

Expert-reviewed clinical evidence helps life sciences teams align decisions across the product lifecycle with a shared clinical foundation grounded in real-world practice

More than 3 million healthcare professionals at more than 50,100 organizations in 191 countries turn to **UpToDate**® clinical decision support from Wolters Kluwer as their trusted reference for the latest clinical evidence and expert clinical interpretations.

Life sciences organizations need that same rigor and confidence to support decision-making throughout the product lifecycle.

Single, trusted interpretation across teams

UpToDate provides a single, trusted interpretation of clinical evidence across medical, commercial, and market access teams. It replaces fragmented internal synthesis, enabling fast, consistent, and objective communication:

- Supports defensible decision-making that aligns with real-world clinical practice.
- Unites teams as a single source for cross-functional clinical interpretation.
- Reduces time and cost of fragmented or manual internal clinical research.
- Helps improve downstream quality by aligning trial design, positioning, and messaging to how clinicians make treatment decisions in practice.

Wolters Kluwer

Why should life sciences organizations choose UpToDate?

Decisions that don't resonate with clinicians or that aren't based in defensible evidence can be costly and impact the quality of drug development research and positioning.

UpToDate synthesizes clinical expertise from more than 7,700 expert authors, editors, and peer reviewers to provide graded recommendations in a succinct, searchable format. ***It's not just based on literature, but reflective of how clinicians actually interpret and apply evidence.***

Regardless of your organization's areas of clinical focus, UpToDate offers valuable insights for key initiatives, ranging from clinical trials and pharmacovigilance efforts, to commercialization and market access:

- Expertise from global healthcare experts across **25** specialties, all in one place.
- More than **13,000** clinical topics
- More than **8,000** unique drug entries
- **93%** of users say UpToDate gives them confidence in their decision-making

"As different disease states come up, I can refer to the latest information on the disease and currently accepted treatments."

Director, patient safety, pharmacovigilance

Increase speed to insights with UpToDate Expert AI

UpToDate® Expert AI is a generative AI-powered functionality layered on top of the evidence-based UpToDate interpretations clinicians already trust. Grounded in human expertise and clinical intelligence, UpToDate Expert AI offers a conversational experience that simplifies searching and gets your teams to reliable guidance even faster.

What you can accomplish with UpToDate

Research & Development: Quickly access the underlying evidence – including care guidelines and research studies – used to develop best practices and recommendations. Use these insights to validate trial assumptions, endpoint selection, and evidence framing against current standards of care and real-world clinical practice.

Pharmacovigilance: Access expert-driven clinical interpretations on adverse reactions, treatment considerations, and current best practices to support medication safety-related decision-making.

Market Intelligence: Monitor clinical guidance on competitor therapies, including off-label uses supported by clinicians and the medical literature. Access detailed background information with timely updates on rapidly evolving fields. Understand emerging therapies, evolving treatment approaches, and shifts in standards of care that may influence clinical decision-making.

"When choosing effective treatment options, consulting UpToDate helps me to provide current treatment that's most effective, with less side effect risks.."
