

# Introducing the industry's first OmniVault for Real Estate Finance

Wolters Kluwer's eOriginal® launches the first OmniVault for Real Estate Finance using its award-winning eVault technology to enable lenders to generate and manage digital assets for eMortgage and home equity lending on a single platform.

**Largest ecosystem in industry**  
over 800 originators, lenders, banks, and custodians

**Proven scalability**  
28+ million annual transactions

**The most securitizations**  
over any other platform—456 valued over \$164 billion

## Benefits

Proprietary technology has over 20 years of proven success

Supports both Mortgage Electronic Registrations Systems (MERS®) and non-MERS eRegistry transactions

Single provider improves procurement, vendor management, and audit efficiencies

Granular access controls allow for departmental separation and greater visibility

Wolters Kluwer's technology enables banks and credit unions to originate digital HELOCs as a Digital Original®, rather than just a PDF or a paper document. When a HELOC is created within the OmniVault for Real Estate Finance offering, it establishes the Digital Original of the HELOC. This ensures verifiable ownership and control, and enables the sale, transferability, pledge, syndication, and securitization of these digital assets.

The eAsset® document repository allows you to tightly control and track access, status changes, and retention policies of your Digital Original documents, providing the highest levels of protection and compliance through the use of digital tamper seals and the most detailed audit trail and reporting functionality available in the market.
