

Legisway

Single Sign-On (SSO)

Maximise efficiency and convenience
when accessing Legisway with Single
Sign-On

If you and your co-workers use a variety of enterprise applications every day, you want access to **Legisway** to be as easy as possible. Remembering usernames and passwords for new software can be a headache, and a barrier to improving collaboration and efficiency across the company. What's more, user management can take time away from more important tasks, not to mention the security risks involved with deactivating users on time, like when they leave the company. Allowing your IT department to be in full control of user management with no extra effort saves time and ensures the highest level of security.

Legisway Single Sign-On (SSO) added feature allows users to simply login to their corporate environment (or Active Directory) and automatically gain access to Legisway via a unique link. Not only does this create a seamless experience for all employees using Legisway, but it gives IT full control over user accounts, whilst actually reducing their workload.

Legisway is a secure online repository for all your legal information, full of smart functions to help you get the most value out of it.

Benefits:

Convenient for users: login to all of enterprise applications including Legisway just once using corporate credentials. No more having to remember multiple usernames or passwords.

Personalised & seamless: users can access Legisway from the application link instead of navigating to the login page and entering their credentials each time, providing a seamless experience.

IT effortlessly in control: user access and password policy are automatically aligned with that of the company. If a user leaves the company and their account is deactivated in the Active Directory, access is disabled on Legisway at the same time. Taking away the manual component of managing enterprise apps saves time and increases security.

Secure: eliminates the need to operate multiple passwords across various apps or password sharing. Employees who use different passwords for different apps are more prone to forgetting their password or writing it down to help them remember, a big security risk. Just as choosing the same password for multiple apps should be avoided by company employees.

Side-by-side comparison:

The below table shows the key features users who have SSO can enjoy vs those who do not.

	✓ With SSO	✗ Without SSO
 Password policy	✓ Integrated with company password policy. Managed by IT. Passwords can be set and modified for non root Legisway users too.	✗ User creates their own password. Increased risk of password loss.
 Login URL	✓ Unique to the customer. Once a user has been authenticated they bypass the login screen and gain direct access to the Legisway dashboard.	✗ Standard login screen. User must confirm their credentials to log into the Legisway dashboard.
 User management	✓ Once a user is set up in Legisway, access is then easily managed via your company's Active Directory without extra work as IT manages this anyway.	✗ User set up and access managed manually by the administrator in Legisway. Takes more time and effort.

How it works:

Legisway's SSO functionality uses the Security Assertion Markup Language 2.0 (SAML 2.0) Standard - a unique and secure way to authenticate users on a corporate IT controlled authentication server to manage access to enterprise applications (in this case the cloud). When planning to enable SSO, it is important to understand the following terms:

- ✓ **Service Provider:** A website that hosts applications. When you enable SSO, Legisway is the service provider.
- ✓ **Identity Provider:** A trusted provider, like ADFS, that can authenticate users and allow single sign-on to access other websites based on an Active Directory. Legisway cannot act as an identity provider. Your IT department will need to check your organisation's identity provider is compatible and set it up accordingly.
- ✓ **Active Directory:** A centralised system for Windows that automates network management of user data, security and distributed resources. IT manages your active directory within which Legisway would sit with SSO.

Getting started:

To get started with Legisway's SSO, we recommend getting your IT department on board from the outset. We have a technical requirement guide, that you can share with your IT department, **available upon request.**

Legisway

Built specifically for legal departments and backed by our deep legal expertise, Legisway enables immediate digital transformation and provides rapid return on investment. The Legisway portfolio of products is designed to fulfil from basic to advanced needs. Our solutions can be configured and scaled to cover the changing needs as your legal department evolves. We empower legal professionals to boost efficiency, increase collaboration across the business, and enable business growth.
